Dear Hiring Manager,

I am writing to express my interest in an **entry-level Cloud or DevOps Engineer** position at your organization. As a passionate and motivated fresher with a strong foundation in **AWS, Linux, and DevOps tools**, I am eager to contribute my skills to build, automate, and maintain scalable and secure cloud environments that drive business success.

During my **6-month Cloud & DevOps training at Fortune Cloud Technology**, I gained hands-on experience with **AWS services** such as EC2, S3, RDS, VPC, Lambda, Route53, IAM, CloudWatch, Auto Scaling, and SNS. I also worked extensively with **Docker** (images, containers, volumes, networking, Docker Compose) and **Kubernetes** (pods, deployments, services, ConfigMaps, Secrets, Namespaces, and EKS cluster setup & management). In addition, I practiced **Infrastructure as Code (IaC)** using **Terraform** for provisioning AWS resources and implemented **CI/CD pipelines** using **Jenkins and GitHub Actions** to automate build and deployment workflows.

Through various projects — including **static website hosting on AWS**, **automated web app deployment**, and **multi-tier architecture implementation** — I developed a solid understanding of infrastructure automation, monitoring, and cloud security best practices. These experiences have improved my problem-solving ability, adaptability, and teamwork skills, helping me collaborate effectively in fast-paced environments.

My goal is to continue learning and growing as a **Cloud/DevOps Engineer**, contributing to automation, scalability, and operational excellence within your team. I would be grateful for the opportunity to discuss how my technical background and enthusiasm align with your organization's objectives.

Thank you for your time and consideration.

Sincerely,

Osama Faisal
